Leading the exercise	6

I decide

- **Objective(s):** To lead participants through a strategic critical thinking process to make decisions about specific digital security tools or practices that they will implement for themselves.
- **Length:** 15 minutes
- **Format:** Exercise
- **Skill level:** Basic
- **Required knowledge:**
 - Hands-on practice with digital security tools and practices from previous training
 - Digital security decisions¹
- **Related sessions/exercises:**
 - Personal perceptions of security²
 - Who do you trust?³
 - How does the internet work?⁴

⁴<https://cyber-women.com/en/digital-security-basics-1/how-does-the-internet-work/>

- Apps and online platforms: friend or foe?⁵
 - Digital security decisions⁶
- **Needed materials:**
 - Digital Safety Tool Figures (ideally 2-3 copies of each, but not enough to have one of each for every participant)
- **Recommendations:** As trainers, we can often impose our own vision of digital security practice on participants, either deliberately but with sincere intentions or unwittingly. However, it is important for us to remember that – as trainers and experts – our participants are under no obligation to either use the tools we teach, or to adapt to the practices that we deem to be “the safest”.

Leading the exercise

1. Open the session by explaining how building a digital security practice is a process that is iterative, and frequently difficult, for anybody. This session builds on the work started during the Digital Security Decisions session in this module, during which participants began to reflect on and identify their needs. Now, you will work with participants to begin identifying specific tools and practices for themselves.
2. On a table or other flat surface – this should be in the middle of the training room, or someplace central and visible to all participants - place the digital safety tool figures (you will find the figures).
3. Tell participants that they will likely recognize many tools they have seen so far among the figures on the table - such as PGP keys, Signal, ObscuraCam or HTTPS Everywhere. Remind the group that, as has been mentioned previously throughout the training, it is they - not you as a trainer, not a technician, nor anyone else - who should choose the tools that best suit them and their needs.

-
4. Ask participants to come forward to the table, to select from among the tool figures on the table those which they think are important to them and their individual needs, and that they plan to continue practicing and using after the training process has completed.
 5. Once everybody has chosen their tools, ask each woman to explain why they chose the tools that they did – they should stand or sit in a circle around the table, and go one by one until everyone has had the chance to share. They should also mention if there were any tools that they wanted to choose, but weren't able to because others had chosen it first.
 6. Now, ask them if they think that there are any other tools missing from the table - even if they don't know the name of it (or even if it exists or not) ask them to say if they have any concerns remaining which are not readily addressed by any of the tools that were available to them.
 7. Close the session with a group reflection about how knowledge is shared, and that those who chose a tool that other participants may have also wanted (but couldn't because there were not enough) should share and exchange it with them so that we can all "learn" from one another.
